DETAILED ACTION

Claims 6-31, 32-38, 42, 49, 50, 52-66 are pending in the application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 6-31, 52-55, 58, 61-66, drawn to a method to determine clinical outcome of a breast cancer afflicted subject treated with an antiestrogen agent by assaying the ratio of HoxB13 and IL17RB, classified in class 435, subclass 6.
- II. Claims 32-38, 42, 49, 57, 59 and 60, drawn to a method to determine clinical outcome of a breast cancer afflicted subject treated with an antiestrogen agent by assaying the expression of an IL17RB sequence, classified in class 435, subclass 6.
- III. Claims 32-38, 42, 50, 56, 59 and 60, drawn to a method to determine clinical outcome of a breast cancer afflicted subject treated with an antiestrogen agent by assaying the expression of an HOXB13 sequence, classified in class 435, subclass 6.

Inventions I, II and III are directed to related processes. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed requires distinct steps in determining the clinical outcome of a breast cancer patient treated with an antiestrogen agent. Each method determines the

Art Unit: 1636

expression of a different gene, for example, the ratio of IL17RB and HOXB13, or by the expression of either IL17RB or HOXB13 alone. The methods as claimed in each group thus comprise distinct steps, and are not obvious because it depends on the expression of different gene or combination of genes. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 1636

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
